

BITWIG STUDIO CONTROLLER EXTENSION

# Generic **Controller**

# Generic Controller

This Controller Extension can be used to support any MIDI device which uses Control Change (CC) messages.

## Sections

In addition to Note Input, the following sections are provided:

### Remote Controls

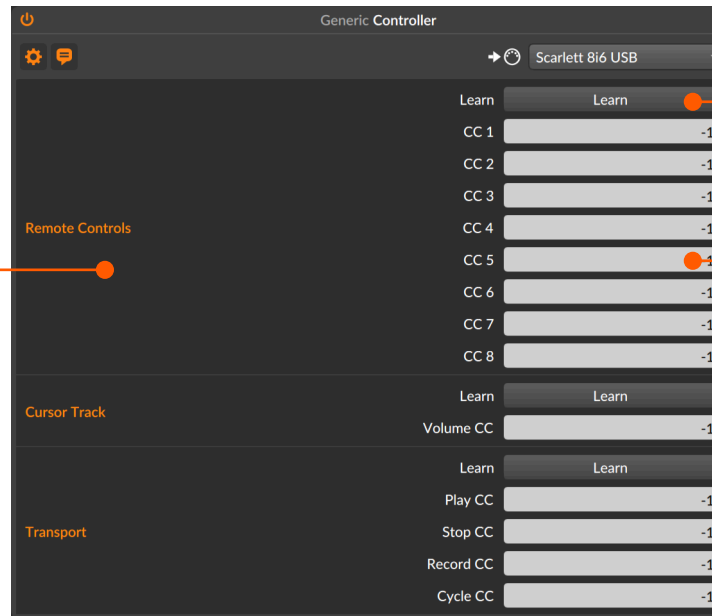

The remote controls can be used for Remote Controls on Device, Track or Project level. By default this will follow the on-screen selection.

### Cursor Track

Can be used to control the Volume of the track which is selected on-screen.

### Transport

Can be used to control Play, Stop, Record, and Cycle (Loop) of the Project Transport

## Configuration

### Automatic Configuration (Learn)

The controls in a section can be automatically configured by pressing the corresponding 'Learn' button and following the on-screen prompts.

### Manual Configuration

The Extension can also be configured manually by entering the CC number, a value of -1 means that this control mapping is off.
